Definitions

A MANDATORY STANDARD may be defined as an official standard, the use of which is compulsory in the conditions specified by the law under which that standard is promulgated; for example, the Official Grain Standards of the United States for Wheat are compulsory under the terms of the U. S. Grain Standards Act, when such grain is shipped by grade in interstate commerce.

A PERMISSIVE STANDARD may be defined as a standard which has been worked out and recommended officially for optional use. Permissive standards are used by the USDA in such lines of work as inspection and market news. They are often adopted by States as mandatory under certain conditions.

A TENTATIVE STANDARD as here used may be defined as a standard that is offered by the USDA for use under commercial conditions to test its practicability or as a basis for discussion. It is still subject to further study and investigation before being officially recommended. Such a standard may later become either a permissive or a mandatory standard, according to circumstances.
